Mob. No. +91 9028621757

CAREER OBJECTIVE

To be associated with progressive organization, where I can employ Data Science, MLOps, Machine Learning, Deep Learning & Natural Language Processing knowledge & skills to contribute the growth of the organization and personal growth in an effectual manner.

SUMMARY

- Created end to end **MLOPS** pipelines for customer churn case study by using tools like Airflow & Mlflow
- Machine Learning end to end **model deployment** on streamlit
- Expertise in validating the data using **EDA** Techniques: Central Tendency, Dispersion, Quartiles/Percentiles, Standardization and Data visualization
- Proficient in understanding & analysing/visualizing of data pertaining to various domains, build best-fit models based on the data and providing appropriate insights to the business problems
- Excellent problem-solving skills
- Solid mathematical foundations behind Machine Learning algorithms
- Solid programming skills with **Python & its libraries** like NumPy, Pandas, Seaborn, Matplotlib, Scikit-Learn, Kears, TensorFlow etc

PROJECTS

- **MLOps Assignment**-Successfully created Data pipeline, Training pipeline, Inference pipeline for creating end-to-end pipeline for Lead Scoring for an edtech industry. Technologies used- Airflow, Mlflow, Pycaret
  https://github.com/AnkushMulkar/Mlops_Lead_scoring_for_edutech_company

- **Automatic ticket collection**-Created a model that can automatically classify customer complaints based on the products and services that the ticket mentions. Concepts implemented- Topic modelling & supervised model. Logistic Regression is the best model with an accuracy of 93% with Precision and Recall as 93% and 92% respectively. https://github.com/AnkushMulkar/Automatic-Ticket-Classification

- **Gesture Recognition**-Developed a Deep learning model b using CNN, LSTM, GRU that can create cool feature in the smart TV that can recognise five different gestures performed by the user which will help users control the TV without remote https://github.com/AnkushMulkar/Gesture-Recognition

- **Sentiment analysis** -This application classifies a user's input as POSITIVE or NEGATIVE based on the Hugging Face Transformer Model & deployed on streamlit https://github.com/AnkushMulkar/Sentiment-analyser-app-Hugging-face-transformers-Streamlit

EDUCATION

- Pursuing Executive Post Graduate Programme in Artificial Intelligence & Machine Learning from IIIT Bangalore
- Post Graduate Diploma course in Thermal Power Plant Engineering from ICOM Institute Nagpur
- Bachelor of Engineering in Electrical Engineering from Nagpur University Nagpur

CERTIFICATIONS

- Machine Learning Deployment from Udemy
- Statistics from Udemy

ACHEIVEMENTS

- Participated in Telecom churn cased study in Kaggle competition
- Participated in AWSOME DAY, AWS Re-Invent & AWS Innovate webinar organised by AWS
- Participated in Devfest organised by Google developer group in Nagpur
